

# Gelatin and Collagen Hydrolysate HAPH Statement

## Antibiotics, Hormones, & Pesticides/Herbicides in Gelatin and Collagen Hydrolysate

In consideration of the raw materials, processing methods, testing and documentation that we have reviewed, we have never seen antibiotics, hormones, pesticides or herbicides detected. As a result, we would not expect to find any present in our finished processed product.

## Antibiotics & Hormones in Gelatin and Collagen Hydrolysate

Although the majority of the animals raised for consumption are given antibiotics and hormones, studies indicate that they are not retained in the hides or skins of the animals.

This would suggest that finding it even at minute levels after the gelatin manufacturing process would be very unlikely.

An excellent proof to demonstrate the absence of antibiotics in a gelatin product is the fact that it is used extensively in laboratories as a growth medium.

## Pesticides/Herbicides in Gelatin and Collagen Hydrolysate

InterGanics, Inc. certifies that our gelatin products are natural products and are free from pesticides/herbicides.
